iDashboards and Dimensions Analysis Provide Healthcare Organizations with Real-Time Information

Dashboard technology visualizes patient and organizational data, making it more useful in clinical environments

Troy, MI – February 27, 2007 – iDashboards (www.iDashboards.com), the leader in web-based dashboards, announced today a partnership with Dimensions Analysis to deliver real-time, intelligent dashboards to healthcare organizations. Dimensions Analysis is a consulting and product development firm concentrating on business intelligence for healthcare applications.

Healthcare organizations spend millions capturing data each year, creating a demand for improved information management, analysis and reporting. Use of business intelligence technology is on the rise, but many solutions do not provide adequate data presentation and visualization tools to assist medical practitioners and C-level executives in making quick and accurate decisions for their patients and organizations.

Dimensions Analysis has selected iDashboards to deliver visual information aides to the healthcare organizations it serves. iDashboards' technology is used to capture information from healthcare information systems, databases and business intelligence tools, and present it in a way that business and clinical users can easily view and understand. Leading healthcare organizations have implemented real-time dashboards and alerts to reduce costs, billing errors, and increase efficiency.

“Visual presentation aids such as real-time dashboards make data more interpretative and useable to healthcare organizations,” said Garry McAninch, Principal of Dimensions Analysis. “iDashboards is an unparalleled solution and partner for delivering a holistic view of clinical information and making it more patient-centric. It also assists with operational aspects such as patient admissions, medical records, billing and pharmacy operations.”

Bridgepoint Health, Canada’s leading center for the treatment of complex chronic disease and complex rehabilitation, is focusing information technology to improve management capabilities and ultimately enhance patient care to address chronic disease. Bridgepoint Health worked with Dimensions Analysis and iDashboards to implement a customized data management and visualization solution.

“iDashboards’ technology gives our management team a real, visual look at our organization in a few clicks,” said Steve Banyai, VP of Information Services and CIO of Bridgepoint Health. “Senior executives and managers can use the dashboard to view daily snapshots of KPIs such as patient day summaries, bed occupancy summaries, daily census counts and monthly trending. Our organization is challenged with maximizing patient volumes to comply with Ministry of Health targets and without compromising patient care. After a year and a half of use, our management team has reached a new level of analytical maturity based on dashboard functionality and will move into new, improved strategies next quarter.”

About iDashboards

Through its award-winning engineering and patented technology, iDashboards helps companies leverage information assets through visually rich, real-time, and personalized business intelligence dashboards to analyze, track, and drill-down through a wealth of information. Global enterprises such as Lockheed Martin, Unisys, ADP, and Georgia Pacific are making quicker, well-informed business decisions with the help of iDashboards. The company is privately held and headquartered in Troy, Michigan. To find out more about iDashboards’ solutions, please call (248) 952-0840 or visit the web site at www.idashboards.com.
